COMPARISON WITH OTHER MARKETS

Earn.World has outperformed the precious metals market, with a growth rate of 7.24% compared the declines of -0.64% for **Silver** and -0.42% for **Gold**.

We have surpassed the renowned market index **DJI** (Dow Jones Industrial Average Index), achieving a remarkable 7.24% return compared to the growth of 2.09% for **DJI**.

The **CCI30** (Cryptocurrencies Index 30) has given 29.1% returns

Our success and consistency in generating profits are due to our diligent research, cutting-edge strategies, and dedication to maximizing returns.

OUR ANALYSIS

ETH

Ethereum hit a record high of ~\$3.4K in February and saw a ~50.9% increase in the previous 30 days. The Ethereum network will see a rise in adoption with the Dencun upgrade, which is scheduled for March 13 and improves network speed. Moreover, conjecture continues to grow on the approval of a spot Ethereum ETF, with Franklin Templeton becoming involved and perhaps drawing institutional investment.

SUI

After rising by about 100%, SUI hit its all-time high of \$1.96. Moreover, the TVL quadrupled to approximately \$447 million. SUI's growth has recently been supported by favorable investor sentiment, partnerships with Alibaba Cloud, Scale3 Labs' Autopilot Platform, and other initiatives. The 50-day and 200-day moving averages are both sloping upward, indicating an overall uptrend, and the MACD is currently positive and above the signal line.

CFX

Conflux Network, also referred to as the "Chinese Ethereum," recently announced the launch of its BSIM card, which functions as a cold wallet to communicate with a mobile wallet, and teamed with BlockBooster to incubate its ecosystem initiatives. Moreover, it intends to launch a layer-2 solution that is compatible with EVM, allowing communication with the Bitcoin network. The adoption of CFX is anticipated to be aided by all these encouraging occurrences.

OUR ANALYSIS

AAVE

AAVE has officially joined the BNB Chain ecosystem. Aave joined a league of top projects like Uniswap, Ambit Finance, and PancakeSwap, underlining the diversity driving BNB Chain's growth. This will focus a lot on mass adoption. This not only complements but strategically aligns with BNB Chain's 2024 outlook. Focused on mass adoption, high-frequency DeFi applications, and network efficiency improvements, the ecosystem is set for an exciting evolution.

BTC

Bitcoin has been gaining wider acceptance as a legitimate form of investment since the launch of ETFs. More financial institutions and investors have been showing interest in Bitcoin. Also, as Bitcoin is nearing halving, it is expected to rise with the high greed index in the market and the positive sentiments of the people.

OUR ANALYSIS

MATIC

Polygon has a lot of tech updates. The team of researchers, ZK engineers, and Polygon ID developers unveiled Polygon ID Release 6, which is a big milestone on Polygon ID's path to becoming the most adopted digital identity solution. This is the first ever implementation of Dynamic Credentials by a privacy protocol, a W3C specification that allows users to refresh expired credentials automatically from their wallet.

DOT

Polkadot launched an Alpha programme that comes at a pivotal moment as builders anticipate the arrival of Agile Coretime, when the barriers to launching parachain projects will be considerably reduced. Using ready-made templates and purchasing coretime, any team can become production-ready in a matter of days.
